AARYAN DHAKAL

aaryan.dhakal22@gmail.com | www.aaryandhakal.com | (667) 403-0865 | Towson, MD | Open to relocation

EDUCATION

Wilmington University, New Castle, DE | B.S. in Computer Science | Expected May 2028
Community College of Baltimore County, MD | A.S. in Computer Science | May 2026

PROJECT EXPERIENCE

QuiccPOS | Restaurant POS and online ordering platform | May 2026 – Present

- Built a restaurant point-of-sale and online ordering system on my own; it's running live at Lombardi's Pizza in Towson, MD, its first client.
- Deployed and run it myself: a Go backend on AWS in Docker, with GitHub Actions shipping zero-downtime releases behind Traefik and a separate staging server for testing first.
- Orders get to the store through a small agent on a Raspberry Pi connected over Tailscale, which prints tickets to the kitchen printer without exposing the store's network to the internet.
- Each restaurant gets its own PostgreSQL schema, so one client's data never touches another's.

NASA Space Apps Challenge

- Led a 5-person team to a national win (nominated globally); built a Discord bot for team task tracking and scheduling.

HomeLab Infrastructure

- Built a dual-node setup (Ubuntu Server + Arch Linux) with 6-VLAN segmentation on MikroTik RouterOS, Cloudflare DNS/DDoS protection, and 10+ Podman services behind a Traefik reverse proxy with auto-SSL.
- Set up a development server reachable from anywhere over Tailscale SSH with YubiKey auth, persistent Docker Compose stacks, and GNU Stow-managed dotfiles.

Netpr | netpr.rndhkl.com

- Built a web app for secure remote printing from anywhere, running on a CUPS backend in a container on my home server.

WORK EXPERIENCE

Student Programmer, IT Application Integration, Youngstown State University, OH | Dec 2022 – Sep 2023

- Moved device setup from manual PXE installs to Microsoft Intune, automating provisioning for 200+ student and staff systems a year and cutting setup time by over 45%.
- Built a secure SharePoint upload portal on the Microsoft Graph API, replacing email-based submissions for 5+ departments handling 1,000+ submissions a year.

Student Technician, Field Technician Department, Youngstown State University, OH | Oct 2022 – Dec 2022 (promoted to Student Programmer within 6 weeks)

- Built Celper, which turned printer alert emails into IT support tickets automatically; the department later adopted it into its IT workflow for 50+ networked printers.

Software Developer, Anmol Special Education Center, Biratnagar, Nepal | Dec 2021 – May 2022

- Built an accounting system for transactions, student records, and financial reports, replacing an Excel-only workflow.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, C++, SQL, C, JavaScript
Frameworks & Libraries: Echo, Django, FastAPI, React, Tailwind, Flutter
Databases: PostgreSQL, SQLite, Redis
DevOps, Infrastructure & Tools: Docker, Kubernetes, Linux, Traefik, AWS, SQS, OpenTelemetry, GitHub Actions, Git
